Premier specializes in the production of custom designed protective packaging. All of our products provide cost effective protective packaging solutions for endless applications that are prone to damage and abrasion during the shipping process. We routinely make customers samples to insure the proper product for each packaging solution.

**Our products are manufactured from:**

- ◆ Polyethylene foam from 1/32, 1/16, 3/32, 3/8, 1/8, 3/16, 1/4, and 1/2 inch thickness. PE foam protects products from impact damage, marring, and scratching.
- ◆ Polypropylene foam from 1/20, 1/16, 3/32, 1/8, 1/4, and 1/2 inch thickness. Similar to PE foam but with higher service temperature, lower slip, and better insulation properties.
- ◆ Polyethylene bubble from 1/8, 3/16, 5/16 & 3/16 - 3rd Web, and 1/2 inch thickness. Provides cost effective protection from impact protection and is reusable and recyclable.
- ◆ Spun Bond Polypropylene non-woven fabric from 0.75 to 2.5 ounce weights. Ideal for delicate surface protection against scratching or marring when cushioning is not required.

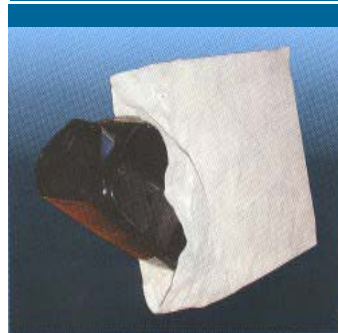

**Premier manufactures an almost unlimited size range in wide variety of styles of products including:**

- ◆ Bags
- ◆ Pouches
- ◆ Sleeves
- ◆ Tubing
- ◆ Multi-Pocket Bags
- ◆ Elastic Covers and more...

**Alternative products are available to create unique products for specialty applications including:**

- Laminations of films to foam, bubble, and spun bonded polypropylene fabric for increased material strength and puncture resistance
- Colors and printed materials for product identification and instructions
- Anti-Static additives for sensitive electronic components
- Vapor corrosive inhibitor for sensitive metals
- Metalized laminations to create a reflective surface for increased thermal properties

Spun Bond Polypropylene
